

RANSOMWARE

It's coming after you!

What is it? A malicious software that encrypts a person's computer and will not release files until the user pays a ransom fee to unlock them.

Ransomware prevention starts with you - follow these 3 tips:

1

If it's an unknown sender:
Don't open the email.

2

If you receive an unanticipated attachment:
Don't download and contact IT.

3

If you don't know, don't go!
Not certain about an email, an attachment, the link or the sender?
Then don't go!

Ransomware is SERIOUS and has a huge effect on

IT Department
Finance Department

Sensitive Data
Customer Trust

Will cost the global economy 6 trillion annually in 2021

65,000 ransomware attacks expected this year

Majority of attacks take more than 9 hours to recover

Your best offense against a Ransomware attack is a good defense.
Where do you start? We've got the answers.
